

Rationale for the Careful Consideration of the UVic ELC and Too Close to Home Request Concerning the WCO project

Who we are...

We believe in the right to Open Consultation

• Renewable energy, emissions reduction or clean tech projects are typically assumed to be "good" projects.

Understanding the Role of

Resource Projects

in Our Communities

is **KEY**

There are opportunities for improvement with the **Current Energy Transition Plans**

Do we Lead or do we Hide?

Preventing industry development will have Consequences

We must focus on getting to YES

 FDI brings higher productivity, enhances skill sets, and knowledge/technology transfer from investments in domestic projects

We must stop The Bleed

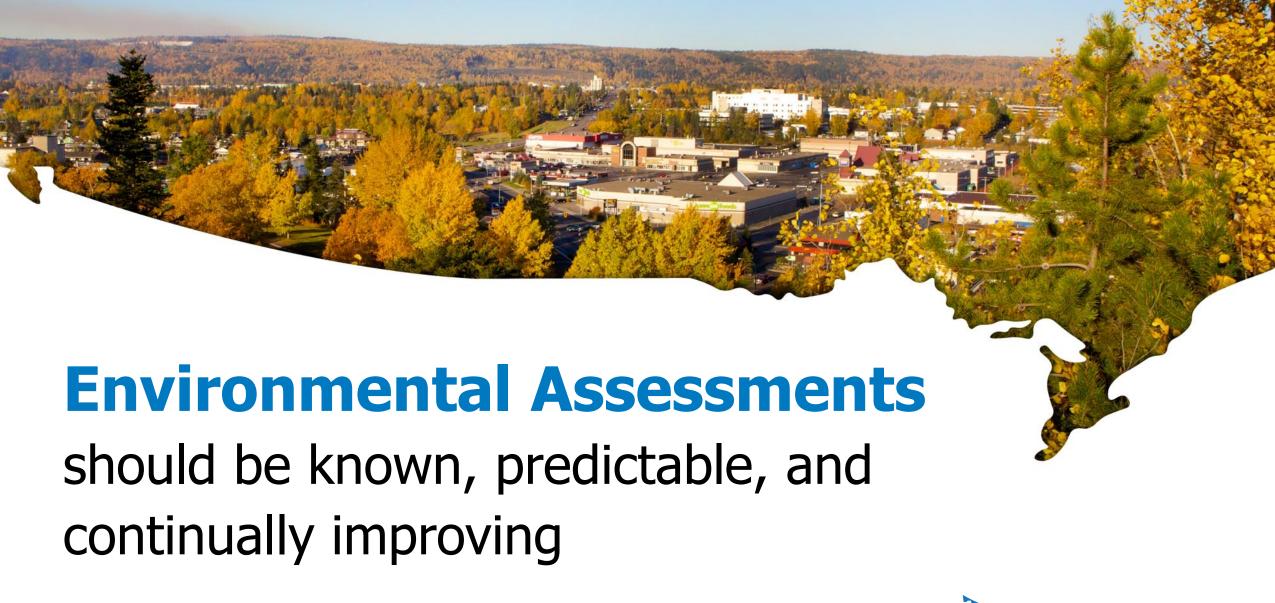

Completion Risk is to be managed by the EA and NOT

Pressure Groups

In Conclusion

- Encourage Council to remain focused on their jurisdiction and informed on community perspectives.
- Get the balance right for the future of British Columbia, particularly the northern region.
- Pressure groups have the right to register their objections to proposed projects through the current EA process.
- All levels of government, including Indigenous Nations, should decide the future of projects.
- Cumulative impacts are already accounted for in the EA process.

It isn't true that facts never change minds, they just don't change minds that are already made up. If you see your ideas as identities to defend, you twist and resist data to rationalize your views. If you treat ideas as hunches to test, you embrace data to update your view.

- Adam Grant, Organizational Psychologist.
