RE: Public Support of Teralta Hydrogen Solutions Inc. Hydrogen production project application for funding to BCMJF and IFIT programs.

Hello,

Teralta is formally requesting to seek the City of Prince George's public support in its funding applications to BCMJF in the amount of \$5M and IFIT in the amount of \$10M for the construction of a hydrogen production facility to be located within the city borders.

The project will entail the production of more than 10 tonnes per day of green hydrogen, with the intent of supplying industrial consumer(s) and offsetting the dependency on natural gas used during manufacturing processes.

It is expected that the project will create 30-60 jobs during the construction phase lasting an estimated 14-18 months with creation of ongoing ancillary jobs supporting the long-term operation of the system over the course of Teralta's 20+ year's project life cycle.

In addition to this, the environmental benefit provided to the City of PG, Province of BC, and Canada of emission reductions in the range of 720,000 tCO₂e over the term of the project is aligned with 2030 and 2050 emissions reductions targets set forth by the govt'. of Canada.

It is with great enthusiasm and hope that Teralta and the City of Prince George and all its diverse community members, can work collectively and supportively to bring this project to fruition in the near future.

Andy Kling

VP of Projects @ Teralta
